

J6 BLACK TOP

Aesthetically delineate roadways with absolute continuity.

Injected monoblock J6 black top delineators help outline roadway shoulders by providing greater visibility for all traveling motorists. Unique black angle identifies the post's presence by providing daylight delineation, especially in snow conditions during the winter season. At night, high powered reflectors characterize the J6 by defining the road ahead. It preserves roadside aesthetics and continuity by utilizing guardrail and jersey barrier half mounts. The J6 is pre-formed with a 30 degree angle, reinforcing its visual capabilities. Bright, prismatic reflectors preserve its distinguished look by projecting light back into the flow of traffic.

ROAD SIDE DELINEATION

J6 FLEXIBLE POP UP

J6 flexible delineator is constructed with a unique mixture of polyethylenes. This mixture allows the post to flex at the base while preserving its rigidity throughout the upper portion. This technique, in conjunction with its triangular shape, allows the post to regain its vertical position without rocking to the left or to the right.

J6 Pop-up easily clips into position utilizing a 12 polyethylene base.

J6 EJECTABLE

J6 COLOR
Available with or without markings

J6 Ejectable delineator post is identical to the J6 Pop-up except it is designed to eject itself from the base during impact. After impact, the J6's design allows the post to be easily re-inserted into its base.

Quickly locate specific sites utilizing mono colored J6 Posts. Post includes administration and / or company markings.

Both the pop-up and ejectible delineator posts are secured to the ground by a pre-installed polyethylene base.

ECO-FLEX

ECO-Flex marker post with black cap is fully flexible and traversable. This model is available in other lengths and can be equipped with any other type reflector.

ECO Flex is a semi-curve, flexible delineator post that is designed to resist twisting and folding forces.

Pre-equipped with a 4 x 6 inch 3M reflective film.

J6 RAIL AND BARRIER HALF MOUNTS FOR ROADSIDE CONTINUITY

J6 guard rail and jersey barrier mount delineators can be used individually or in conjunction with ground mount models. When these products are used together, roadways appear visually aesthetic and are uniformly outlined, an obvious advantage for all traveling motorists.

Rail mounts easily affix to the guard rail's bolts.

J6 70 CMTS

J6 75 CMTD

J6 top mount jersey barrier delineators easily affix to concrete and plastic barriers with two (2) anchor bolts.

Available in single and double sided units for maximum visibility.
