### PAVEMENT MARKERS

**Adapting to today's demands for retroreflectivity.**

Proven studies show the most effective safety products in all adverse weather conditions is provided by reflective road studs. US Reflector Road Studs offer optimum lane identification in all weather conditions. They are visible and can be heard and felt, due to the rumble when a vehicle crosses them. Installed on thousands of miles of roadways throughout the world. Tire action facilitates self cleaning keeping the reflective surface clean and brilliant. Road Studs offer a low cost alternative for enhancing roadways and turns. Retroreflection increases visibility, visibility increases safety.

---

#### STREET LEVEL MARKERS

**TCB-1**

**DIMENSIONS**

- Length 4" Width 4" Height 0.75"

TCB-1 pavement markers are designed with a high power reflective lens set into a non aggressive rounded shoulder incline for smooth roll over.

The TCB-1 is shatter proof, with a special hard coat protecting the prismatic lens from abrasion. Angled prisms provide optimum night visibility.

TCB-1 Pavement studs are available in single and double sided reflective lens.

- Colored housing with matching lens for day time visibility.
- Adhesion: Stick-fast instant pre-cut Butyl pads, Hot melt or adhesive can be used.

Colors: white, amber, blue, green and red.
Combinations: red-amber, red-white.

#### STREET LEVEL MARKERS

**TCB-5**

**DIMENSIONS**

- Length 3.94" Width 3.94" Height 0.7"

Highly reflective "Cats Eyes" road studs reflect light similar to "LED" type lighting.

The TCB-5 provides durability and longevity when installed in areas of severe traffic flow or in dry sandy climates.

Shatter proof, the TCB-5 outlasts most markers by its unique one piece design. Manufactured with 45 glass elements on each face for optimum visibility.

TCB-5 has recessed "grabbers" for easy installation.

- Colors: white, amber, blue green, red and fluorescent yellow.

TCB-5 pavement studs are available in single or double sided lens.

**TCB-15**

**DIMENSIONS**

- Length 8.6" Width 5.9" Height 11.2"

Lane Dividers are temporary delineators that provide excellent day/night time warning guidance to road users. Equipped with a flexible rubber shaft adding a reliable means to stop dangerous lane changing.

Absolutely traversable even in heavy circulated areas.

Single or double sided. With or without rubber shaft.

Shaft equipped with stud reflector for enhanced visibility.

TCB-15 Delineators are available with metal supports for additional anchoring strength in sensitive areas.

Divder stud without rubber shaft.

128 Glass elements per side

Prices reflect single units only, please contact your sales representative for quantity pricing.
Aluminum pavement markers provide extreme durability for sensitive areas. Aluminum Road Studs are designed to resist extreme impacts providing a long lasting durable road stud for all applications. Road studs are the most effective safety device for night time guidance even under the most adverse weather conditions. Studs are visible and can be heard and felt due to the rumble generated when a vehicle crosses them. Reflective road studs provide optimum lane indication when visibility is dramatically reduced. Aluminum studs are available in two sizes. Reinforcement stem assures the studs precise anchoring position.

WWW.USREFLECTOR.COM
Optical 360 Degree reflective pavement markers for all roadways.

Optical reflective road markers are constructed from high quality hardened glass, a material that is harder than steel offering enhanced mechanical properties exceeding 38 tons. Optical Toughened glass technology preserves the reflective core and provides unmatched abrasion and wear characteristics when compared to plastic pavement markers.

Two models available, 360-RM1 for unidirectional 360° visibility, and the 180-RM2 for monodirectional 180° visibility. Both markers contain optical reflex technology setting a new standard for the pavement marking industry. Developed for the essential needs of tomorrow’s growing roadway systems.

Armourstud’s 360° uni-directional optical reflex technology reflects light back to its projected source from any area of its 360 degree radius. Armourstud’s optical reflex characteristics provide a precise and distinctive light signal to oncoming vehicles without projecting light in an opposite direction.

Armourstud’s 180° monodirectional optical reflex technology enables the stud to perform from half of its exposed surface. The opposite side of the marker absorbs entering light beams with no return. Armourstud monodirectional properties act as a single sided pavement marker providing additional entrance angles up to 180 degrees from face front.

Armourstud flat top markers are available in two models: Unidirectional and Monodirectional. Armourstud’s low profile marker carries the same characteristics as 360-RM1 and 180-RM2 models. Its protruding optical center is only 1/2 inch in height. Flat top markers are designed for reduced noise impact and can be used in both rural and highway applications.

APPLICATIONS

- Sleek compact design
- Approaching 360° visibility
- Optical toughened glass
- Compact design
- Self cleaning lens
- Precise light reflex. Guaranteed 5 years

CHARACTERISTICS

- Optical tempered glass
- Mechanical strength >38 tons
- Unidirectional visibility
- Monodirectional visibility
- Optical reflection: 1268 cd/fc at 0.3 degrees
- 360-RM1 dimensions: 3.93 x 1.69 inches
- 180-RM2 dimensions: 3.93 x 1.50 inches

WWW.USREFLECTOR.COM
Solar powered L.E.D. active pavement markers for enhanced visibility.

L.E.D. active solar pavement markers offer outstanding clarity and visibility. Crystal clear toughened glass optic shell provides un-parallel visual appearance and performance. With a strength resistance exceeding 18 tons, and shock resistance of over 14.75 ft. lbs, the Solar Armor Stud is durable, long lasting and self cleaning. Utilizing the latest in solar and reflective technology, Armor Stud has the ability to function with an impulse flash effect or a constant burn while its built in passive micro prism technology responds to all road situations day or night even if the diodes are in a passive mode.

CHARACTERISTICS
- Optic tempered glass delivers perfect visible light reflex.
- Automatic light detection triggers L.E.D. components.
- 5 nights operation needs only 8 hours of charge.
- Sleek compact design
- Dimensions: 4.09 x 1.89 x 0.74 inches
- Quick easy installation with bituminous or other compatible adhesive.

BENEFITS
- Visible from 430 to 1094 yards
- Compact design
- Automatic L.E.D. trigger
- Guaranteed 5 years
- Optical Toughened glass shell
- Self cleaning

TECHNICAL CHARACTERISTICS
- Solar panel: Monocrystalline
- Accumulator type: 2, 110 mA / 5 day charge
- Diodes: 0.1969 in. / 5mm
- Luminosity: >4000 mcd
- Flash Frequency: 1.6 Hz
- Minimum current: 0.15 mA
- Impulse flash current: 20 mA
- Flash duration: 3.7 ms

INSTALLATION
- Drill
- Adhesive
- Insert
- Complete

MATERIALS
- Armorstud MK6-SC and MK6-SB markers are available in single and double sided faces in all standard colors.
- Armorstud MK6-S markers resist snow plows equipped with rubber blades.

SYNCHRONISED BLINKING L.E.D. MARKER
Armorstud MK6-SB solar powered markers have been designed to illuminate and outline roadways without the need for electrical components. MK5-S markers provide night visibility beyond a vehicles light zone of over 650 yards.

Armorstud's construction and form protects the L.E.D. diodes while enhancing visibility through its scratch resistant optical hardened glass protective housing.

Micro-Prism technology
MK6-S markers are equipped with a reflective micro prism L.E.D. support panel. This panel reflects light back to a

CONTINUOUS BURN L.E.D. MARKER

In case of an accident provoking the destruction of the marker, the Armorstud with its Toughened glass optic shell will break into little pieces comparable to a lateral window on a vehicle. This type of material should not be a threat on tire deflation or cutting a person who has fallen on the broken elements.

WWW.USREFLECTOR.COM
RFC intelligent solar L.E.D. pavement marking systems are the latest innovation in wireless pavement marking systems. RFC markers are controlled and synchronized by an independent pilot beacon that can be linked with several different sensitivity detectors. These devices detect vehicles traveling in wrong directions, high speeds, hazard zones, light, fog and frost.

Armorstud MK6-S high performance marking systems define road hazards while intelligently detecting climate changes providing an extra margin of safety for all road users. Self-cleaning and maintenance free.

**Activating Principles of Illumination**

**Detectors**
- Detect vehicles traveling in wrong directions, high speeds as well as danger zones.
- Sensitivity detectors detect fog and frost sending information directly to the Pilot Beacon

**MK6-S**
- Solar pavement markers are activated by the radio-controlled Pilot Beacon that directly designates the markers illumination effect. Such effects include sequential illumination, blinking or constant burn.

**Pilot Beacon**
- The Pilot beacon is a radio frequency controlled independent command post powered by a five year interchangable battery. Command post activates the MK6-S markers while simultaneously sending information to the road control operations center for evaluation or change.

**Benefits**
- Multiple illumination effects.
- Illuminate open and closed lanes
- Illuminate high risk zones such as areas of fog.
- Signal and alert changing and merging lanes
- Channelize traffic flow in all areas.
- Control the signal distances between vehicles
- Illuminate shadow zones
- Illuminate rotaries were electricity is non existant.

**Advantages**
- Real time intelligent signalization for improved traffic circulation.
- Establish different safety modes that adapt to specific traffic conditions. Example, if there were fog, the MK6-S would stay on continuous mode to outline the roadway ahead. If there was an accident ahead, the studs would “Flash” indicating danger.

Radio frequency controlled activation systems replace traditional cables hookups. The studs are powered by an accumulator and solar panel. The pilot beacon is equipped with a long duration battery allowing the RFC system to be quickly and easily installed.

Real time signalization features allows the RFC system limitless interventions when necessary.

360 degree curb markers illuminate and define roadways with optical reflex vision. Opti-CURB toughened glass Curb Markers have been exclusively developed to illuminate and outline all types of concrete and stone curbing. Designed for 360 degrees of omni reactional reflectivity enables the stud markers to be visible from any incoming direction. Opti-CURB markers reinforce the presence of curbs and straightaways for approaching motorists regardless of their direction of entrance.

Made from toughened glass adding a strength of 15 tons, preserves the reflective core of its nonconductive self-cleaning lens.

**Optical Reflex Function**

Omni-Reactional reflex is based on four main elements:

A. Entrance Angle  
B. Mirror  
C. Optical Lens  
D. Foot

The Incidence Surface, protruding over the curb receives the light beams from approaching vehicles.

The entrance angle of light entering the Omni-reactional lens (a), is redirected to a specific area of the metalized support acting as a MIRROR (b). The beam of light is then reflected off the optical lens (c) returning light back to its source. The FOOT (d) supports the mirror projection lens acting as a support and adding longevity to its optical lens. This new reflex technology provides the driver with a precise and efficient light signal even under wet conditions.

**Benefits**

Harder than steel surface with optical characteristics projects a powerful light reflex enhancing any curb for maximum visibility. Visible to the driver from virtually any direction without projecting light to oncoming vehicles.

Available in white, yellow, red and blue.

Opti-curb’s Smooth surface allows self-cleansing. Mechanical properties provide outstanding strength, durability and wear resistance when compared to plastic markers systems.

**Compact, 2 square inches**

Opti-curb’s compact size allows installations under 2 minutes when utilizing Holotool. Fitted with a special rubber locking joint eliminates the need for adhesives.

**Distinct Reflex**

Opti-CURB Provides exceptional visual outlining of all raised curbing. Maintenance free.

Illuminate raised curbing and medians with high profile Island Beacons.

Island beacon functions as a highly reflective oversized pavement marker. Designed to withstand vehicle roll overs, Island Beacons provide day/night visibility for all approaching vehicles. Beacons may be placed in front of “KEEP RIGHT” signs reducing vehicle / curb impacts. Designate entrance points quickly and effectively. Installation requires lags and or adhesive. Beacon is equipped with 8 cat's eye reflectors. All standard colors available.

**SAFETY & PREVENTION**

Island Beacons do not require an electrical connection. They are visible from afar due to their High Reflecting Power and assure maximum nighttime safety. As one approaches islands or intersections, their presence permits drivers to navigate safely.

**MULTIPLE COLOR CONFIGURATIONS AVAILABLE**

Island Beacons can be color configured for specific safety applications. Easily replace reflectors with rivets or screws.

**ISLAND BEACON**

- White Reflectors
- Yellow Reflectors
- Orange Reflectors
- Green Reflectors
- Red Reflectors

**Specifications**

- Length: 7.8"
- Width: 7.8"
- Height: 4"
- Weight: 3.13 lbs
- Reflectors: 4, 1.5 x 7 in. 4 Trapazoids

- White Reflectors: 2600 cd /fc/ft²
- Yellow Reflectors: 2400 cd /fc/ft²
- Orange Reflectors: 1770 cd /fc/ft²
- Green Reflectors: 945 cd /fc/ft²
- Red Reflectors: 850 cd /fc/ft²

Reflectors are available in White, Yellow, Orange, Green, Blue and Red.

Island Beacons can be installed onto any type of raised surface for enhanced identification. Use Island Beacons to identify entrance and exit points or to designate specific maintenance areas.

Island Beacons are constructed with A.B.S. for strength and durability. Built to resist trucks and vehicle impact rollovers without destruction of the beacon or reflective lenses.

Island Beacon is equipped with 8 High Power prismatic reflectors for maximum visibility.
